UC Docket No.: 2000-422-1

## WHAT IS CLAIMED IS:

5

1. An artificial tissue comprising a support matrix, microvascular endothelial cells from a first animal, and connective tissue cells from a second animal, wherein the artificial tissue comprises one or more microvessels produced therein.

2. The artificial tissue of claim 1 further comprising epithelial cells from a third animal.

- 3. The artificial tissue of claim 2 wherein the epithelial cells form a mutlilayered epithelium.
- 4. The artificial tissue of claims 1 or 2 wherein the first, second and third animals are mammals.
- 5. The artificial tissue of claim 4 wherein the mammals are selected from the group consisting of primate, mouse, pig, cow, cat, goat, rabbit, rat, guinea pig, hamster, horse, or sheep.
  - 6. The artificial tissue of claim 4 wherein the mammals are humans.
- 7. The artificial tissue of claims 1 or 2 wherein the first, second and third animals are the same.
- 8. The artificial tissue of claims 1 or 2 wherein the first, second and third animals are different.
  - 9. The artificial tissue of claim 1 or 2 wherein the support matrix comprises Vitrogen®.
- 10. The artificial tissue of claim 1 or 2 wherein the microvascular endothelial cells comprise primary human adult lung microvascular cells.
- 11. The artificial tissue of claim 1 or 2 wherein the connective tissue cells comprise primary human adult dermal fibroblasts.
- 12. The artificial tissue of claims 2 or 3 wherein the epithelial cells comprise primary human adult keratinocytes.
- 13. An artificial tissue comprising Vitrogen®, primary human adult lung microvascular cells, and primary human dermal fibroblasts wherein the artificial tissue comprises one or more microvessels produced therein.

Attorney Docket No.: 407E-914500US

UC Docket No.: 2000-422-1

14. An artificial tissue comprising Vitrogen®, primary human adult lung microvascular cells, primary human dermal fibroblasts, and primary human keratinocytes wherein the artificial tissue comprises one or more microvessels produced therein.

- 15. The artificial tissue of claims 1 or 2 wherein the artificial tissue produces one or more compounds selected from the group consisting of laminin, fibronectin, collagen I, collagen III, hyaluronic acid, VEGF 145, VEGF 121, bFGF, IL-8, Syndecan-1, CXCR-1, CXCR-2, a mannose-containing protein, an acetylglucosamine-containing protein, PECAM-1, alpha-SMA, MMP-2, a growth factor receptor, plasminogen activator, mSRA, and CD68.
- 16. The artificial tissue of claims 1 or 2 wherein the one or more microvessels produce one or more blood cells.
- 17. The artificial tissue of claims 16 wherein the blood cells comprise mononuclear leukocytes.
- 18. The artificial tissue of claims 1 or 2 wherein the artificial tissue produces one or more perioendothelial cells.
- 19. The artificial tissue of claims 1 or 2 wherein the artificial tissue produces an extracellular matrix.
  - 20. The artificial tissue of claims 1 or 2 wherein the artificial tissue is self-maintained.
- 21. A method for producing an artificial tissue comprising: mixing together a support matrix and connective tissue cells to form a support matrix-connective tissue mixture and forming a culture comprising two layers of support matrix-connective tissue mixture separated by a layer of endothelial cells, wherein said endothelial cells contact inner surfaces of the support matrix-connective tissue mixture layers.
- 22. The method of claim 21 further comprising plating a layer of epithelial cells on an outer surface of one layer of support matrix-connective tissue mixture.
  - 23. The artificial tissue produced by the method of claim 21 or claim 22.
- 24. A method for studying a biological process, said method comprising administering a test compound to the artificial tissue of claim 1 or claim 2 and measuring the effect of the test compound on a parameter of the biological process.

UC Docket No.: 2000-422-1

25. The artificial tissue of claims 1 or 2 wherein the tissue is maintained in vitro.

26. The artificial tissue of claims 1 or 2 wherein the tissue is a composition suitable for tissue grafting.

- 27. A method of screening for an agent that inhibits angiogenesis, said method 5 comprising:
  - contacting a biological culture comprising an adhesion polypeptide selected from the a) group consisting of VE-Cadherin and PE-CAM with a test agent;
  - contacting said biological culture with a chemokine or an angiogenic fragment thereof; b)
  - detecting the level of phosphorylation of said adhesion polypeptide, wherein: an increase c) in the level of phosphorylation, as compared to said level in a biological culture of the same type contacted with a smaller amount of the test agent, indicates that the test agent inhibits angiogenesis.
  - 28. The screening method of claim 27 wherein said method additionally comprises recording any test agent that reduces the level of phosphorylation in a database of agents that inhibit angiogenesis.
  - 29. The screening method of claim 27 wherein said smaller amount of the test agent is no test agent.
    - 30. The screening method of claim 27 wherein the chemokine is a CXC chemokine.
    - 31. The screening method of claim 30 wherein the chemokine is interleukin-8 (IL-8).
    - 32. The screening method of claim 30 wherein said biological culture is in vitro.
  - 33. The screening method of claim 30 wherein the biological culture is the chorioallantoic membrane (CAM).
  - 34. A method of prescreening for an agent that inhibits angiogenesis, said method comprising:
- contacting an adhesion polypeptide selected from the group consisting of VE-Cadherin 25 and PE-CAM with a test agent; and
  - detecting specific binding of the test agent to the adhesion polypeptide.

38

UC Docket No.: 2000-422-1

**35.** A method of screening for an agent that inhibits angiogenesis, said method comprising:

- a) contacting a biological culture comprising MMP-9 with a test agent;
- b) contacting said biological culture with a chemokine or an angiogenic fragment thereof;
- c) detecting the level of MMP-9 activity, wherein a decrease in the level of MMP-9 activity, as compared to said level in a biological culture of the same type contacted with a smaller amount of the test agent, indicates that the test agent inhibits angiogenesis.
  - 36. The screening method of claim 35 wherein said method additionally comprises recording any test agent that reduces the level of MMP-9 activity in a database of agents that inhibit angiogenesis.
  - 37. The screening method of claim 35 wherein said smaller amount of the test agent is no test agent.
    - 38. The screening method of claim 35 wherein the chemokine is a CXC chemokine.
    - 39. The screening method of claim 38 wherein the chemokine is interleukin-8 (IL-8).
    - 40. The screening method of claim 38 wherein said biological culture is in vitro.
  - 41. The screening method of claim 38 wherein the biological culture is the artificial tissue of claim 1.
  - **42.** A method of prescreening for an agent that inhibits angiogenesis, said method comprising:
- 20 a) contacting MMP-9 with a test agent; and

10

Į.

b) detecting specific binding of the test agent to MMP-9.
